

## Oracle Cloud Implementation

### Cornerstone Data Systems, Inc.

Your data is your business's most valuable asset. So give your databases the care and attention they deserve while still minimizing cost, and reducing the workload of your IT staff. The numerous benefits of remote database administration are all within reach.

So don't get left behind. Get in touch with Cornerstone today. Our consultants can answer any questions you may have about our process, and we'd be happy to discuss a customized remote DBA solution for your company based on your particular needs, IT infrastructure, and budget.

### WHY COMPANIES CHOOSE US?

- We provide a personalized experience
- Thought & strategic leadership is included for all our clients
- Flexible arrangements working on-site or remote
- Boutique services, so that you don't pay for services you don't need
- One-on-one support & training for your staff
- We provide you with expert-level resources with real world experience

There is a lot to think about when it comes to implementing a new Oracle Cloud environment. From data migration to compatibility with legacy apps and databases, and much more. If you are thinking about implementing a modern Oracle PaaS or IaaS service, but are not sure where to start, Cornerstone Data Solutions is here to help.

### We Specialize In Oracle IaaS And PaaS Implementation

We specialize in both IaaS (Infrastructure as a Service) and PaaS (Platform as a Service) Oracle Cloud implementations. IaaS and PaaS are revolutionary technologies which allow both small and large companies to benefit from blazing fast performance, secure and redundant storage, and flexible, customizable application deployment – all in the safe, efficient Oracle Cloud.

Whether you're a small business looking to upgrade your databases, or a larger enterprise-size company interested in a comprehensive data migration and outsourced IT infrastructure, we're here to help.

### Our Oracle Cloud Implementation Process

Each company has different needs – so instead of a “one-size-fits-all” Oracle Cloud implementation process, we use a unique roadmap that allows us to develop the perfect solution for your particular needs.

- **Project assessment and road-mapping** – We begin by performing a comprehensive IT assessment of your existing infrastructure and applications, and developing a thorough roadmap that will outline each and every project step and deliverable.
- **Design and analysis** – We will analyze the results from the first step, and begin designing an Oracle Cloud deployment which will allow for maximum efficiency, ease-of-use, and ROI.
- **Build and testing** – We will build and test your Oracle Cloud implementation, to ensure that it is stable and ready to handle mission-critical business operations.
- **Deployment and administration** – Once we are satisfied with our results, we will deploy your Oracle Cloud installation. We can also offer administration and training services for your new cloud-based infrastructure. This makes it easy for your developers and IT staff to adapt to a new environment

By creating a completely customized Oracle Cloud, we can ensure that your specific needs are addressed and that the benefits of your new cloud implementation are maximized.
